## Factor FUN

*is a game to help you practise your multiplication facts.*

*Here's how to play:*

20	28	40	56
21	30	42	63
24	32	45	64
25	35	48	72

- The first player puts each paper clip on a factor below the board. (On any turn, you can decide to put both paper clips on the same factor.) The player then multiplies the two factors and covers up the product on the board with a counter.
- The second player moves one of the paper clips to make a new multiplication fact and covers the product with a counter.
- Continue taking turns, moving one paper clip each time.
- The winner is the first player to get four counters in a 2 by 2 square.
