

## Frank's arms

*Counting on Frank* by Rod Clement (1990; Harper Collins Publishers: Sydney) has some great ideas for measurement investigations. One of the ideas introduced in the story is about Frank carrying a trolley load of cans to the supermarket.

1. Trolleys measure 60 litres or 80 litres. What do those measures mean?
2. How heavy do you think Frank's load of cans is?
3. How many cans are you able to carry in a reusable supermarket bag?

How did you work that out?
