

Your task is to work as a group to measure the length of the slinky, coming up with a way to measure that allows for its coiled shape. Do not try to stretch the slinky out to its full length.

1. Estimate the length of the slinky. Record this estimate.
2. Plan the way you will work this out and write it down. Include a list of the tools you will use.
3. Follow your plan to come up with an answer and record this below your plan.
4. Can you think of a way to check your answer?
