

Your task is to work on your own to draw a diagram of the label on a can – while it is still attached to the can! Choose a can to work with then plan a way to measure both the length and the height of the label.

Write down the way you plan to measure the label before you begin, and draw your diagram underneath your plan.

At the end of the week the labels will be removed from the cans and you will be able to compare your diagram to the label to see how accurate you were.
