

Your task is to work on your own to find out how much wrapping paper you would need to wrap a ball as a present.

Use the balls provided.

1. Estimate how much paper you think you will need.
2. How much will it take to just wrap around the ball?
3. How much overlap will you need to allow?

It may be easiest to plan on using a square of paper but you can decide what shape you will use. Record your estimate of the paper required.

1. Plan the way you will work how much paper you will need and write it down. Include a list of the tools you will use.
2. Follow your plan to come up with an answer and record this below your plan.
3. Can you think of a way to check your answer?
