

Array for Quadratics: 4

Complete the array diagram and expand each quadratic. Then make up three problems like these for someone else to solve.

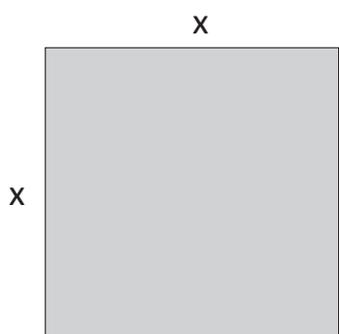

$$(x+4)(x+3) = \square$$

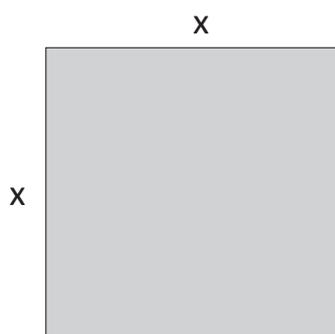

$$(x+5)(x+2) = \square$$

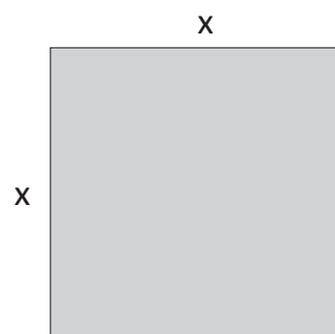

$$(x+7)(x+3) = \square$$

$$(x+8)(x-5) = \square$$

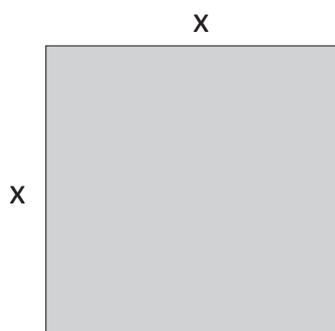

$$(x-3)(x+4) = \square$$

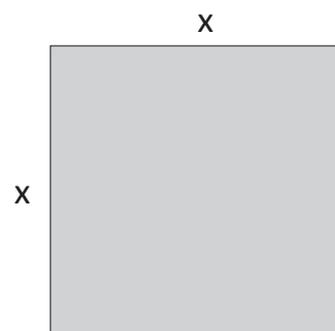

$$(x+6)(x-3) = \square$$

$$(x-5)(x+6) = \square$$

$$(x-2)(x-3) = \square$$

$$(x-1)(x-4) = \square$$
