

## Sharing more lollies

On Monday, Sam, Sonny and Sylvia share some lollies they'd been given. Sonny got half as many lollies as Sam, and Sylvia got a third as many lollies as Sam got. They got the same number of lollies each day up to (and including) Friday.

If Sonny got 9 lollies on Wednesday, how many lollies did Sylvia get on Thursday?

Is the number of lollies that Sylvia got over Monday, Tuesday, Wednesday and Thursday, less than the number Sonny got for the days Thursday and Friday?

How many days does it take for the number of lollies Sonny got, to be greater than the number Sam got on Friday?
