

Decimal recurrence

When 100 is divided by a whole number sometimes the answers are interesting decimals.

If you calculate $100 \div 11$ you get this display on a calculator:

The pattern would carry on forever if the calculator screen was big enough. The 1 at the end comes from rounding.

Here are some other decimal patterns that come from dividing 100 by a whole number. What number is 100 divided by to get each pattern?

What other decimal patterns can you find by dividing 100 by a whole number?
