

Hut building

A hut is to be built with a single pitch roof. The plans below show the main structure of the hut, but needs a chimney to be added with the following specifications.

The top of the chimney must be 500 mm above the top of the roof. The chimney will be attached to the centre of the outside of the South wall. The base of the chimney is to be 1m wide by 50 cm deep.

Draw the chimney on the plans.

Note: Each of the squares on the paper are 5 mm x 5 mm.
