

A4 containers

Tipene and his friends have scissors, tape and sheets of A4 paper to **construct** closed containers from a single sheet of paper.

Tipene's net is a single piece that can be folded or bent to make the container. (He joins the sides with tape not tabs.)

Miri makes a shape where the net is not one piece but can be taped together to make the container (making a more efficient use of paper).

Pepe makes a shape where one face is a square.

Who makes the container with the **biggest volume**?
