Domino Facts

You need ☑ a set of dominoes (from your teacher)
☑ 1, 2, or 3 classmates

Game

Deal out the dominoes evenly between the people playing.

The person who has the domino with the smallest total number of dots on it will start. They choose any one of their dominoes and put it down in the centre.

The next person puts down one of their dominoes if the dots on it make a multiplication or division fact with the dots on the domino it links to.

With the dominoes shown here, 3 x 2 = 6 is the fact.

Take turns to keep joining new dominoes to the domino chain. If you can't move, miss a turn. Try to use all your dominoes up.

The winner is the person who has managed to use up the most dominoes when no one can add any more dominoes to the chain.
