

Four In A Row Multiplication

35	14	16	27	12
21	4	20	18	36
15	28	30	45	63
48	32	12	72	3
40	42	24	56	7

1 2 3 4 5 6 7 8 9

Rules:

Player One starts by putting a paper clip under two numbers in the row below the board.

He/She multiplies the numbers and covers that answer on the board with a counter of their chosen colour.

Player Two moves only one paper clip to a new number in the row beneath the board. He/She multiplies the paper clip numbers together and covers that answer on the board with a counter of their chosen colour.

Play continues like that until one player has four of their counters in a row vertically, horizontally, or diagonally. They are the winner.

If the answer to multiplying two paper clip numbers is already covered the player loses that turn.
