Weighing time

Mr and Mrs Watson and their son work on the dairy farm. They are all getting overweight so **weigh** themselves on the only scales they have. These are used to weigh cows and can't weigh anything **less than** 100kg. So Mr Watson says that they should get on the scales two at a time.

When they weigh Mr and Mrs Watson, the scales show 124 kg.

Mrs Watson and her son together weigh 140 kg.

Mr Watson and his son weigh 152 kg.

How heavy is each member of the family?
