

Where's My Bus?

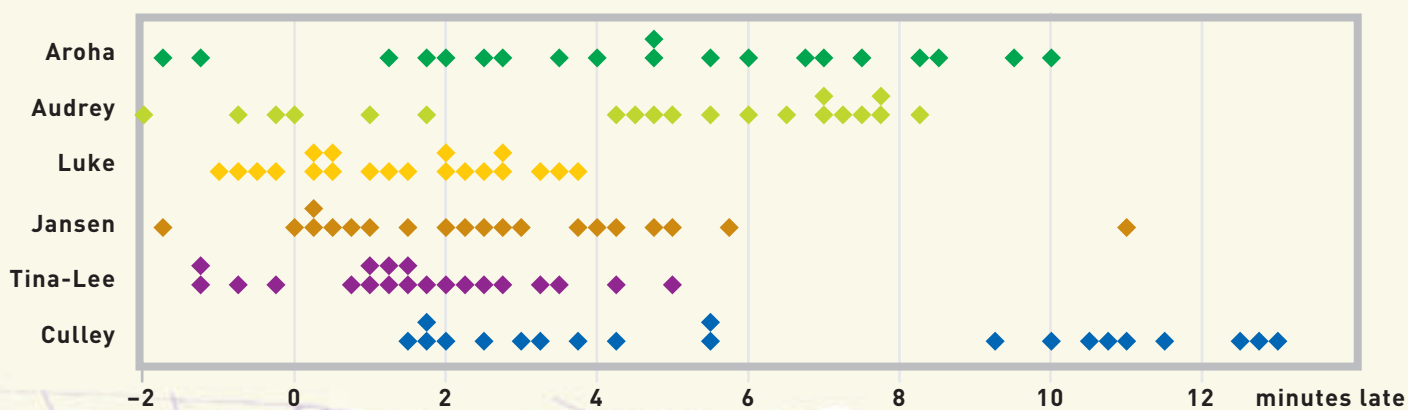

You need ★ classmates

Activity

Aroha and five of her friends all live in different parts of the city and catch different buses to school. Some of the buses are better at keeping to the timetable than others.

The six friends decide that, for 4 weeks, they will keep a record of how early or how late their buses come. They summarise the data in this chart:

Bus Arrivals

1. For each person's bus, write a brief description of its arrival time data, beginning like this: "Aroha's bus ..."
2. With a classmate, put the six bus services in order from "most reliable" to "least reliable". Make sure that you agree on the order and can explain why you have ranked the buses as you have.
3. Check with two other classmates to see if they have come up with the same order. If not, discuss the differences and see if you can reach agreement.
